

# EXTENDED CONSTRUCTED RESPONSE

Humans can impact the success of the Monarch butterfly's migration by tracking the monarchs and planting butterfly gardens.

Humans can track the monarch's journey to support their success. The text states, "These citizen scientists attached tiny stickers called tags to the butterflies' wings. Anyone who found a tag sent it back to Urquhart. The tags told Urquhart where each butterfly started out and ended up." This helps me understand that tracking the monarchs helps scientists learn about the paths they take. If we know what paths monarchs take, it makes it easier to protect their journey and help them be successful.

Humans can also plant butterfly gardens to support the Monarchs. The author says, "By planting butterfly gardens, they're restoring the habitat monarchs need to survive." This shows that the butterfly gardens are providing shelter and food for the Monarchs' journey, which will help them stay alive during the migration.

In conclusion, humans can impact the success of the Monarch butterfly by tracking their location and creating habitats for Monarch butterflies to feel safe.
